EDUCATION

University of Toronto | Computer Engineering

September 2020 - April 2025

- 3.84 / 4.00 cGPA
- Artificial Intelligence Minor
- Business Certificate

EXPERIENCE

Frontend Engineer | UoftHacks (*Currently*)

• Developing and maintaining the frontend of the hackathon's website for 100+ visitors yearly

Machine Learning Researcher | iQua Research Group (Summer 2022)

- Conducted and plotted 100+ experiments using reinforcement learning algorithms such as TD3 & A2C for machine learning models for **two** research papers
- Extended federated learning framework *Plato* to support reinforcement learning algorithms for clients
- Redesigned Plato's loss functions, optimizers, learning schedulers, & models to use a factory design pattern

PUBLICATIONS

Lethe: Interference-Based Forgetting for Continual Learning Agents in Reinforcement Learning

Salma Emara, Baochun Li, Tim Zeyl, *Daniel Li Liu (Under review)*

Cascade: Curriculum Federated Reinforcement Learning with Interference Avoidance

Salma Emara, *Daniel Li Liu*, Baochun Li (*Under review*)

ENGINEERING PROJECTS

Reinforcement Algorithms in Federated Learning Framework Plato

- Extended research framework Plato to support reinforcement learning for clients
- Designed a custom model to support actor and critic models used in TD3 & A2C
- Created a customized trainer for both the TD3 & A2C algorithm that evaluates/saves average rewards for clients and the server
- Implemented a custom algorithm that communicates between the server & clients Project Links (First Paragraph):

https://danielliliu.ca/projects.html

Mapping Application with Intelligent Trip Planning

- Created and designed fully functional **intelligent** map, similar to google maps
- Organised large amounts of data into data structures C++ STL
- Implemented full graphics with a user-friendly interface
- Implemented an optimal algorithms for path finding
- Created smarter algorithms for path finding and travelling salesman using heuristic

GoTime - NewHacks Hackathon Project, 4th Place Winner

- Created and designed a **web app** using the Electron Framework, leveraging JavaScript, HTML/CSS, and Node.js.
- Optimized university student's schedules/time and class locations at the University of Toronto using Dijkstra's algorithm for an optimal path with C++

Project Link: https://github.com/danielliucs/GoTime

AWARDS

Deans List (2020-2022)

Natural Sciences and Engineering Research Council of Canada's Undergraduate Student Research Award (2022)

TECHNICAL SKILLS

LANGUAGES

- C / C++ (Expert)
- Python (Expert)
- Java (Prior Exp)
- MATLAB (*Prior Exp*)
- JavaScript (Prior Exp)
- ARM Assembly (Proficient)

WEB DEVELOPMENT

- HTML / CSS (Proficient)
- Next.js (Prior Exp)

SOFTWARE

- Git
- GTK
- PyTorch

HARDWARE

- Verilog
- **Ouartus / Modelsim**
- Breadboards
- DE1-SoC Boards

OTHER INDUSTRY KNOWLEDGE

- Artificial Intelligence
- Machine Learning
 - Reinforcement Learning
 - Continual Learning
 - Curriculum Learning
